مركز الملك عبد الله المالي

Walter P Moore provided structural engineering design services for this 80-story high-rise office tower in Saudi Arabia. At **400 meters** tall and 1,991,000 square feet, this world class office tower is to be the landmark project of the new King Abdullah Financial District in Northern Riyadh.

CMA Tower in King Abdullah Financial District

CMA Tower in King Abdullah Financial District

1. Determine the MC (Mega Column) geometry

2. To transform the TPS CS into the MC coordinate system.

2. To transform the TPS CS into the MC coord. system.

The MC owns its coordinate system.

3. When the MC is on place and request control.

We setup a TPS into the CW (Core Wall) coordinate system (explain later how to do) and we measure some targets on the Mega Column.

Slab level

4. 3D Transformation from MC coordinates into CW.

Using common points known in both (CW and MC) coordinate systems, we can derive the 3D transformation parameters and determine the top circle (**3 points for instance**) targets into the CW coordinate system.

Slab level

5. Quality check.

After the 3D transformation we can examine the residuals and evaluate how much the MC could have been distorted.

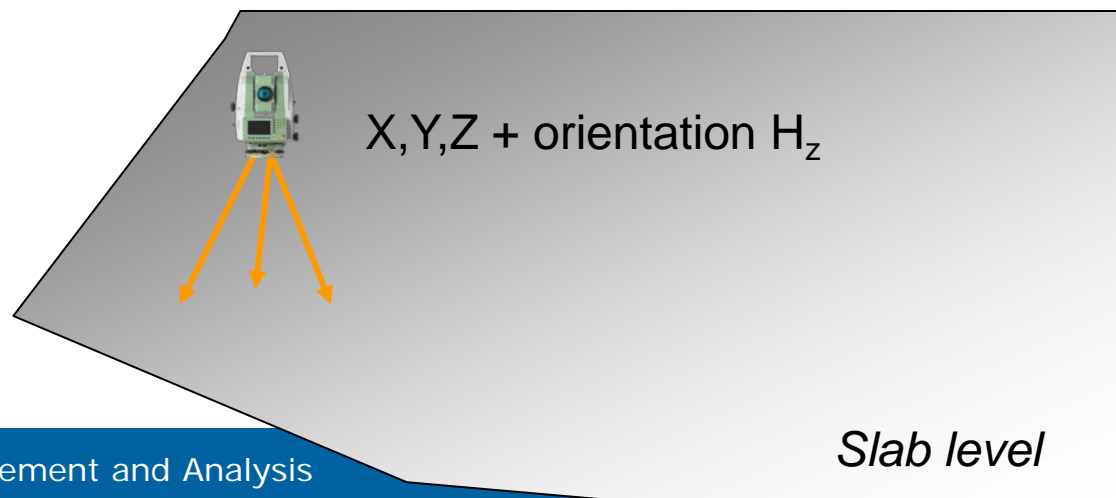

We do need at least 5 common points in both CW and MC coordinate systems.

6. Annexe – How to setup the TPS ?

To setup the TPS on CW coordinate system we do need at least 2 points (x,y) for 2D position and orientation and 1 point (z) for 3D.

There are 2 possibilities, the first one (1) is to transfer coordinates from the top (using reflectors placed on surrounded buildings) and the second (2) is to transfer coordinates from the ground.

6. Annexe – How to setup the TPS ? From the top (1)

CMA Tower in King Abdullah Financial District

$$\begin{bmatrix} X \\ Y \\ Z \end{bmatrix} = \begin{bmatrix} T_x \\ T_y \\ T_z \end{bmatrix} + s \cdot \begin{bmatrix} \cos \phi \cdot \cos \kappa & -\cos \phi \cdot \sin \kappa & \sin \phi \\ \cos \omega \cdot \sin \kappa + \sin \omega \cdot \sin \phi \cdot \cos \kappa & \cos \omega \cdot \cos \kappa - \sin \omega \cdot \sin \phi \cdot \sin \kappa & -\sin \omega \cdot \cos \phi \\ \sin \omega \cdot \sin \kappa - \cos \omega \cdot \sin \phi \cdot \cos \kappa & \sin \omega \cdot \cos \kappa + \cos \omega \cdot \sin \phi \cdot \sin \kappa & \cos \omega \cdot \cos \phi \end{bmatrix} \cdot \begin{bmatrix} x \\ y \\ z \end{bmatrix}$$

$$s \cdot R = (1 + ds) \cdot dR = \begin{bmatrix} 1 + ds & -d\kappa & d\phi \\ d\kappa & 1 + ds & -d\omega \\ -d\phi & d\omega & 1 + ds \end{bmatrix} = I + \begin{bmatrix} ds & -d\kappa & d\phi \\ d\kappa & ds & -d\omega \\ -d\phi & d\omega & ds \end{bmatrix}$$

$$X = dX + (1 + ds) \cdot dR \cdot X_0$$

$$\begin{bmatrix} X_i \\ Y_i \\ Z_i \end{bmatrix} = \begin{bmatrix} x_i & 0 & z_i & -y_i & 1 & 0 & 0 \\ y_i & -z_i & 0 & x_i & 0 & 1 & 0 \\ z_i & y_i & -x_i & 0 & 0 & 0 & 1 \end{bmatrix} \cdot \begin{bmatrix} ds \\ d\omega \\ d\phi \\ d\kappa \\ dT_x \\ dT_y \\ dT_z \end{bmatrix}$$

Many thanks for your consideration
